

# Hearing Protection

## Product Line Card

Personal Safety Division

3M is committed to helping employers develop effective hearing conservation programs for their employees who are exposed to hazardous noise.

To meet this commitment, we have increased the production of our most popular models, available in a variety of styles to accommodate the unique needs of your workforce. **Our best-selling models are highlighted in yellow** to help you easily identify and select the right assortment of hearing protection.

# 3M Hearing Protection

3M offers one the most recognized family of hearing protection devices on the market today. That's because 3M is dedicated to the success of your hearing conservation program with resources to educate and train, a variety of products to protect, and systems to validate the fit of the hearing protection devices you provide to your work force.

## Our Brands

---

Hearing Protection

3M™ E-A-R™ Classic™ Earplugs were introduced 50 years ago. This simple, yet revolutionary hearing protector remains one of the most widely used earplugs in the world. Since then, 3M has launched a comprehensive line of yellow earplugs to enhance form, fit and function. E-A-R's yellow color is so distinctive, it's a registered trademark of 3M.

Protection & Communication

The foundation of the 3M™ PELTOR™ brand is based on knowledge in acoustics and speech, which became the backbone of PELTOR industrial research and development. Today, the 3M PELTOR catalog carries a diverse line of passive and electronic hearing protection and protective communication devices.

40 million workers are exposed to loud noise and 13 million suffer from hearing disorders despite industry regulations\*. You can advance your hearing conservation programme with a customised and comprehensive approach to the hearing protection challenge. Implementing a solution that really makes a difference begins with understanding the hazards, regulations and the factors that impact protection.

## The real world concerns of hearing protection

**Variable Noise Levels:** Every environment is different and workers can face a wide range of sound levels throughout the day and in different areas at the same facility.

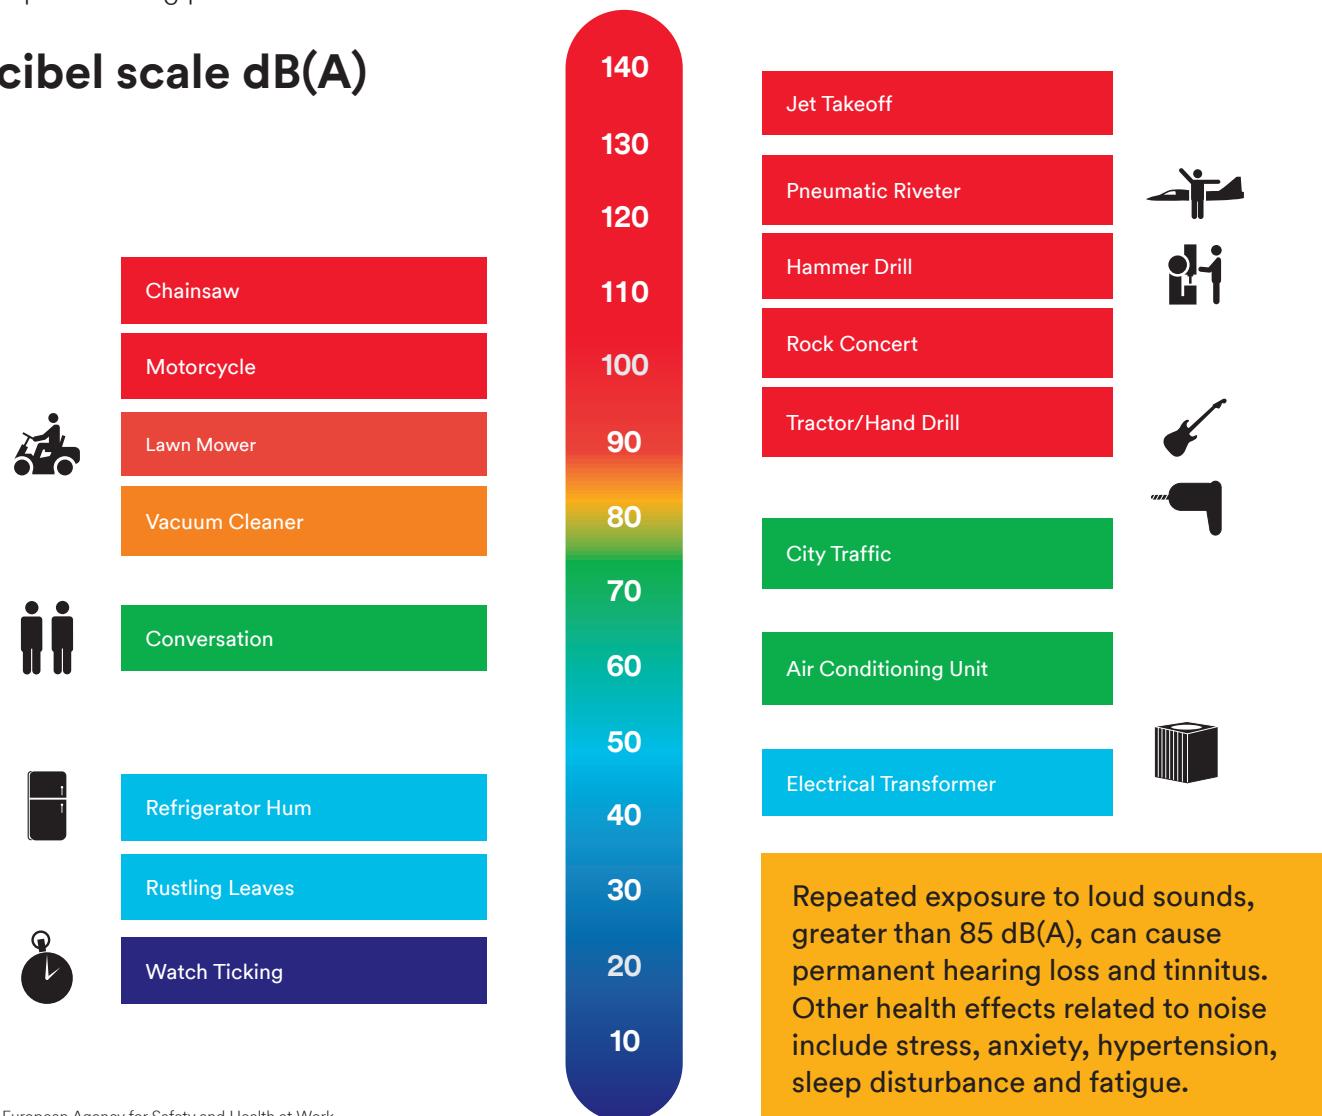

**The Human Factor:** Each person has a different shape, size and anatomy of the ear canal, so there is no one-size fits all hearing protection solution. The key to achieving optimal protection is in product selection and having the best fit possible. Where there is an essential need for workers to communicate or hear warning sounds, it is vital that their hearing is also protected from hazardous noise levels.

**Employee Communication:** Where there is an essential need for workers to communicate or hear warning sounds it is vital that their hearing is also protected from hazardous noise levels.

## What types of sounds require hearing protection?

At home and work, it's important to understand which sounds may cause hearing loss and require hearing protection:

### Decibel scale dB(A)

# Ear fit validation

## How do you decide what hearing protection you will offer to your workers?

If you are simply using the SNR found on the hearing protection packaging as a guide you may not be providing accurate protection levels for every worker. Ears come in many shapes and sizes and to make sure all workers are getting the protection they need, you need to know their Personal Attenuation Rating (PAR).

**Noise-induced hearing loss is 100% preventable.**

## Why 3M?

As the leader in hearing protection, 3M offers a complete solution, with dual-ear and earmuff testing capabilities plus a user-friendly interface. The 3M™ E-A-Rfit™ Dual-Ear Validation System is the fast and easy way to find your employees' PAR, because we know how important it is to make your hearing conservation program fit seamlessly into your operation.

Learn more: [3M.co.uk/Earfit](http://3M.co.uk/Earfit)

### 1 Fit

Have the employee insert their hearing protection.

### 2 Test

Connect to microphones and begin speaker test sound.

### 3 Assess

Use PAR to customise hearing protector selection.

## What's your PAR?

Every employee is different.  
Every job is different.  
Every ear is different.

Finding each employee's PAR will help you have assurance that workers' hearing is protected and they are compliant with the law. That's why we made the new 3M™ E-A-Rfit Dual-Ear Validation System fast, accurate and easy.

## Fit testing is key

Get results you can trust. The 3M™ E-A-Rfit™ Dual-Ear Validation System measures the effectiveness of the earmuff or earplug inside the employee's ear, providing accurate, quantitative results. Because you can simultaneously test both ears in less than 5 seconds, you have more time to focus on training and education, including the importance of fit and protection.

## Did you know that 40% of employees incorrectly select or use hearing protection?\*

What should you consider when choosing your hearing protection?

Some key factors include the level of attenuation and protection required, also considering if situational awareness and communication are necessary. Compatibility with other PPE is important in terms of comfort and ergonomics, but perhaps more importantly combinations of earmuffs and carriers must be tested and certified against PPE Regulation 2016/425 (EU).

**3M believes in the importance of compatibility.**

We can help you understand the requirements of EN 352:2020 Part 3 and how it supports your selection of safe and approved combinations of earmuffs and carriers like safety helmets.

## Fit Testing

3M strongly recommends fit testing of hearing protectors. Research suggests users will receive less noise reduction than indicated on the box, due to variation in hearing protector fit, fitting skill and motivation of the user. This helps identify if workers are getting the expected protection, especially since individual fit and usage can vary significantly.

## ⚠ Warning

**Important notice Product Selection and Use:** Many factors beyond 3M's control and uniquely within user's knowledge and control can affect the use and performance of a 3M product in a particular application. As a result, customer is solely responsible for evaluating the product and determining whether it is appropriate and suitable for customer's application, including conducting a workplace hazard assessment and reviewing all applicable national and/or European regulations and standards. Failure to properly evaluate, select, and use a 3M product in accordance with all applicable instructions and with appropriate safety equipment, or to meet all applicable safety regulations, may result in injury, sickness, death, and/or harm to property. **Warranty, Limited Remedy, and Disclaimer:** A limitation of liability applies to the 3M product(s). For warranty statement and limitation of liability, refer to your supply agreement or the 3M terms & conditions of sale. 3M industrial and occupational products are intended, labelled, and packaged for sale to trained industrial and occupational customers for workplace use.

PSD products are intended for occupational use only.
